Task 1

Laughter is the best medicine

Every week, Dr Doppit goes round the wards at the children's hospital. But instead of a white coat and a stethoscope, Dr Doppit has a red nose and carries balloons. She is the hospital's "clown doctor" and her real name is Hilary Day.

After studying drama at university, Hilary saw an advert for a clown doctor at the hospital. "The job was perfect for me," she says. "My mother and grandmother were both nurses, so caring for people is in my blood. Also, I love doing children's theatre."

Before she started, Hilary did four weeks training, where she learnt how to do magic tricks and make balloons into funny shapes. She also had to study child psychology and basic medicine.

Her visits to the hospital start with a meeting with the nursing staff to find out which patients a visit will be most useful for. Most children are delighted to see a clown, but there are some who are too ill, or afraid of clowns. Hilary always checks first. Then she does some magic, makes balloon animals or tells them a story.

"We know that laughing can have a positive effect on a person's health," says Hilary. "It produces chemicals in the brain that make you relax and feel better." Everyone agrees that regular visits from Dr Doppit can make a big difference to a child's recovery. "Children in hospital miss their everyday life at home and at school," says one hospital manager. "As well as possibly being frightened and homesick they are often bored. The clown doctor gives them something to look forward to and happy memories to take home afterwards."

6. What is the writer's aim in this text?
 - a) to describe a typical day in a children's hospital
 - b) to explain a method of helping young patients
 - c) to encourage doctors to learn some circus skills

7. Why was Hilary particularly suitable for the job of clown doctor?
 - a) She had studied medicine at university.
 - b) She already knew how to do magic.
 - c) She enjoyed working with children.
 - d) She had been a nurse in a hospital.

8. Before Hilary starts, the staff tell her which children

- a) have asked to see her.
- b) are going to leave the hospital soon.
- c) want to hear a particular story.
- d) will benefit most from her visit.

9. The hospital manager thinks that Dr Doppit's visits

- a) are useful if the parents can't visit.
- b) help children get better more quickly.
- c) might be frightening for some children.
- d) help the children forget they stay in hospital.

10. Dr Doppuit can influence

- a) parents' behavior.
- b) nurses' work.
- c) kids' getting better.

What's cooking?

(11) Tomorrow's children will eat differently from their parents. Many modern homes don't have a dining room because the occupants usually eat meals in front of the television. In the future, families eating together at home will be an unusual event. Food will be heated in a microwave. If there is a cooker, it will be on a dining table rather than in the kitchen.

(12) The kitchen of the future will be intelligent! Thanks to automation, it may be possible to call home on a mobile to start a cooking programme. There is nothing better than to come home after a long working day to see your dinner ready. With such a kitchen you can easily organize a party for your friends.

(13) In the future, fewer Europeans will eat meat because they think that other foods are better for their health. In addition, farmers will realise that growing crops is a more efficient use of land than raising cattle. "Every time a person gives up eating beef," says food expert Brian Ford, "three thousand square metres of land are freed for crop production."

(14) But meat is a major source of protein. How will we get the protein we need without meat? The answer is: from plant sources. Mushrooms and other fungi will be specially grown, fortified with vitamins and artificially flavoured. Artificial

flavouring will become widespread.

(15) According to Ford, fish will always be popular. “Fish, especially oily fish, have much to contribute to the diet of the future. The problem is that we are catching too many fish. We need to reestablish sanctuaries – “national parks” – in the oceans where fish are free to multiply.”
